Chapter 1

Genetics

- 1.1 Mendel's principles 1
 - 1.1.1 Mendel's laws of inheritance 3
 - Law of segregation 3
 - Law of independent assortment 5
 - 1.1.2 Incomplete dominance and codominance 7
 - 1.1.3 Multiple alleles 8
 - 1.1.4 Lethal alleles 10
 - 1.1.5 Penetrance and expressivity 11
 - 1.1.6 Probability 11
- 1.2 Chromosomal basis of inheritance 14
- 1.3 Gene interaction 15
 - 1.3.1 Dominant epistasis 17
 - 1.3.2 Recessive epistasis 18
 - 1.3.3 Duplicate recessive epistasis 19
 - 1.3.4 Duplicate dominant interaction 19
 - 1.3.5 Dominant and recessive interaction 19
 - 1.3.6 Genetic dissection to investigate gene action 21
 - 1.3.7 Pleiotropy 22
- 1.4 Genetic linkage and gene mapping 23
 - 1.4.1 Genetic mapping 26
 - 1.4.2 Gene mapping from two point cross 28
 - 1.4.3 Gene mapping from three point cross 29
 - 1.4.4 Interference and coincidence 31
- 1.5 Tetrad analysis 33
 - 1.5.1 Analysis of ordered tetrad 34
 - 1.5.2 Analysis of unordered tetrad 36
- 1.6 Sex chromosomes and sex determination 37
 - 1.6.1 Sex chromosome 37
 - 1.6.2 Sex determination in animals 38
 - Sex determination in humans 40
 - Genic balance theory of sex determination in *Drosophila* 40
 - 1.6.3 Sex determination in plants 41

1.6.4	Mosaicism	42
1.6.5	Sex-linked traits and sex-linked inheritance	42
1.6.6	Sex-limited traits	44
1.6.7	Sex-influenced traits	44
1.6.8	Pedigree analysis	44
1.7	Quantitative inheritance	48
1.7.1	Quantitative trait locus analysis	51
1.7.2	Heritability	52
1.8	Extranuclear inheritance and maternal effect	52
1.8.1	Maternal effect	55
1.9	Cytogenetics	57
1.9.1	Human karyotype	57
1.9.2	Chromosome banding	58
1.9.3	Variation in chromosome number	59
1.9.4	Chromosome aberrations	63
1.9.5	Position effect	68
1.10	Genome	69
1.10.1	Genome complexity	70
1.10.2	Transposable elements	73
1.10.3	Gene	81
1.10.4	Introns	82
1.10.5	Acquisition of new genes	84
1.10.6	Fate of duplicated genes	85
1.10.7	Gene families	86
1.10.8	Human nuclear genome	87
1.10.9	Organelle genome	88
1.10.10	Yeast <i>S. cerevisiae</i> genome	89
1.10.11	<i>E. coli</i> genome	89
1.11	Eukaryotic chromatin and chromosome	90
1.11.1	Packaging of DNA into chromosomes	92
1.11.2	Heterochromatin and euchromatin	97
1.11.3	Polytene chromosomes	100
1.11.4	Lampbrush chromosomes	101
1.11.5	B-chromosomes	102
1.12	DNA replication	102
1.12.1	Semiconservative replication	102
1.12.2	Replicon and origin of replication	104
1.12.3	DNA replication in <i>E. coli</i>	106
	Topoisomerase	107
1.12.4	Telomere replication	117
1.12.5	Rolling circle replication	118
1.12.6	Replication of mitochondrial DNA	119

1.13	Recombination	119
1.13.1	Homologous recombination	120
1.13.2	Site-specific recombination	125
1.14	DNA repair	127
1.14.1	Direct repair	127
1.14.2	Excision repair	127
1.14.3	Mismatch repair	129
1.14.4	Recombinational repair	130
1.14.5	Repair of double strand DNA break	132
1.14.6	SOS response	133
1.15	Transcription	134
1.15.1	Transcription unit	134
1.15.2	Prokaryotic transcription	135
	Process of transcription	137
1.15.3	Eukaryotic transcription	141
1.15.4	Role of activator and co-activator	146
1.15.5	Regulatory elements	147
1.15.6	DNA binding motifs	149
1.16	RNA processing	151
1.16.1	Processing of eukaryotic pre-mRNA	151
1.16.2	Processing of pre-rRNA	160
1.16.3	Processing of pre-tRNA	163
1.17	mRNA degradation	164
	mRNA surveillance	165
	P-bodies and stress granules	165
1.18	Regulation of gene transcription	166
1.18.1	Operon model	166
1.18.2	Tryptophan operon system	173
1.18.3	Riboswitches	177
1.19	Bacteriophage lambda: A transcriptional switch	178
1.20	Regulation of transcription in eukaryotes	181
1.20.1	Influence of chromatin structure on transcription	181
1.20.2	Histone modification	
1.20.3	DNA methylation and gene regulation	183
1.20.4	Post-transcriptional gene regulation	185
1.21	RNA interference	186
1.22	Epigenetics	189
1.23	Genetic code	190
1.24	Protein synthesis	195
1.24.1	Incorporation of selenocysteine	207
1.24.2	Cap snatching	208
1.24.3	Translational frameshifting	208

1.24.4	Antibiotics and toxins	208
1.24.5	Post-translational modification of polypeptides	210
1.25	Mutation	212
1.25.1	Mutagen	217
1.25.2	Types of mutation	219
1.25.3	Fluctuation test	223
1.25.4	Replica plating experiment	224
1.25.5	Ames test	225
1.25.6	Complementation test	226
1.26	Developmental genetics	227
1.26.1	Genetic control of embryonic development in <i>Drosophila</i>	228
1.26.2	Genetic control of vulva development in <i>C. elegans</i>	232

Chapter 2

Recombinant DNA technology

2.1	DNA cloning	239
2.2	Enzymes for DNA manipulation	241
2.2.1	Template-dependent DNA polymerase	241
2.2.2	Nucleases	241
2.2.3	End-modification enzymes	245
2.2.4	Ligases	247
2.2.5	Linkers and adaptors	247
	DNA and RNA purification	248
2.3	Vectors	250
2.3.1	Vectors for <i>E. coli</i>	251
	Cloning vectors based on plasmid DNA	251
	Cloning vectors based on viral DNA	252
	Cosmids	254
	Cloning vectors based on M13 phage	254
	Phagemid vectors	255
2.3.2	Cloning vectors for yeast, <i>S. cerevisiae</i>	256
2.3.3	Vectors for plants	257
	Plasmid based vector	257
	Viral vectors	260
2.3.4	Vectors for animals	261
2.4	Introduction of DNA into the host cells	261
2.4.1	In bacterial cells	261
2.4.2	In plant cells	261
2.4.3	In animal cells	264
	Transfection	265
	Transduction (Virus-mediated transfection)	266

- 2.5 Selectable and screenable marker 267
- 2.6 Selection of transformed bacterial cells 268
- 2.7 Recombinant screening 269
- 2.8 Expression vector 271
 - 2.8.1 Expression system 272
 - 2.8.2 Fusion protein 273
- 2.9 DNA library 273
 - Colony and plaque hybridization 276
- 2.10 Polymerase chain reaction 276
- 2.11 DNA sequencing 280
 - Chain termination method 280
 - Genome sequencing 282
 - Chromosome walking 283
- 2.12 Genome mapping 284
 - 2.12.1 Genetic marker 284
 - 2.12.2 Types of DNA markers 285
 - 2.12.3 Physical mapping 289
 - 2.12.4 Radiation hybrids 291
- 2.13 DNA profiling 292
- 2.14 Genetic manipulation of animal cells 293
 - 2.14.1 Transgenesis and transgenic animals 293
 - 2.14.2 Gene knockout 295
 - 2.14.3 Formation and selection of recombinant ES cells 297
- 2.15 Nuclear transfer technology and animal cloning 298
- 2.16 Gene therapy 299
- 2.17 Transgenic plants 304
 - 2.17.1 General procedure used to make a transgenic plant 304
 - 2.17.2 Antisense technology 307
 - 2.17.3 Molecular farming 308
- 2.18 Plant tissue culture 309
 - 2.18.1 Cellular totipotency 309
 - 2.18.2 Tissue culture media 309
 - 2.18.3 Types of cultures 312
 - Callus cultures 312
 - Protoplast cultures 312
 - Cell-suspension cultures 313
 - Organ culture 313
 - Meristem culture 313
 - Embryo culture 314
 - Haploid culture 314
 - Somatic embryogenesis 315
 - Organogenesis 316

- 2.18.4 Somaclonal and gametoclonal variation 316
- 2.18.5 Somatic hybridization and cybridization 317
- 2.18.6 Applications of cell and tissue culture 318
- 2.19 Animal cell culture 320
 - 2.19.1 Primary cultures 320
 - 2.19.2 Cell line 320
 - 2.19.3 Growth cycle 322
 - 2.19.4 Culture media 323

Chapter 3

Plant Physiology and Development

- 3.1 Plant-water relationship 329
 - 3.1.1 Diffusion and osmosis 329
 - 3.1.2 Chemical potential of water and water potential 331
 - 3.1.3 Mass flow 333
- 3.2 Absorption and radial movement of water 333
 - 3.2.1 Absorption of water 333
 - 3.2.2 Soil water 335
 - 3.2.3 Radial movement of water from root surface to the tracheary element 335
 - 3.2.4 Root pressure 336
- 3.3 Ascent of sap 336
 - 3.3.1 Xylem anatomy 337
 - 3.3.2 Mechanism of ascent of sap 337
- 3.4 Transpiration 338
 - 3.4.1 Mechanism of stomatal opening and closing 339
 - 3.4.2 Factors influencing transpiration 341
 - 3.4.3 Guttation 341
- 3.5 Absorption and radial movement of mineral nutrients 342
- 3.6 Mineral nutrition 343
 - Types of essential elements 344
 - Roles of essential elements and deficiency symptoms 345
 - 3.6.1 Liebig's law of the minimum 347
 - 3.6.2 Nitrogen cycle 347
 - 3.6.3 Nitrogen assimilation 348
 - 3.6.4 Biological nitrogen fixation 350
- 3.7 Translocation in the phloem 353
 - Phloem loading and unloading 355
 - 3.7.1 Allocation and partitioning of photoassimilates 357
- 3.8 Plant hormones 357
 - Types of plant hormones 358
 - 3.8.1 Auxin 358

3.8.2	Gibberellins	362
3.8.3	Cytokinins	364
3.8.4	Absciscic acid	366
3.8.5	Ethylene	367
3.8.6	Brassinosteroids	368
3.8.7	Strigolactones	368
3.8.8	Jasmonates	368
3.8.9	Hormones signaling pathway	368
3.9	Photomorphogenesis	374
3.9.1	Phytochrome	374
3.9.2	Cryptochrome	378
3.9.3	Phototropin	379
3.9.4	Photoperiodism	380
3.9.5	Florigen	383
3.10	Vernalization	383
3.11	Flowering genes	384
	Role of floral organ identity genes	385
3.12	Plants movements	387
	Tropic movements	387
	Nastic movements	389
3.13	Seed dormancy and Germination	389
3.14	Plant development	390
3.14.1	Pollination and Self-incompatibility	395
3.14.2	Asexual reproduction	396
	Apomixis	397
3.14.3	Embryogenesis	397
	Root apical meristems	400
	Shoot apical meristem	401
3.15	Plant secondary metabolites	402
3.15.1	Terpenes	403
3.15.2	Phenolics	405
3.15.3	Glycosides	408
3.15.4	Alkaloids	408

Chapter 4

Human Physiology

4.1	Tissues	415
	Epithelial tissue	415
	Connective tissue	419
	Nervous tissue	422
	Muscular tissues	423

4.1.1	Organ systems of the human body	424
4.2	Nervous Systems	425
4.2.1	Histology of nervous tissue	426
	Neurons	426
	Neuroglia	428
4.2.2	Structural organization of CNS	429
	Blood-brain barrier	430
4.2.3	Major parts of the brain	431
	Limbic system	433
4.2.4	Spinal cord	434
	Reflex and reflex arc	437
4.2.5	Peripheral nervous system	437
4.2.6	Autonomic nervous system	439
	Somatic system	442
4.3	Sensory organs	443
4.3.1	Eye	443
	Operation of photoreceptors	447
4.3.2	Ear	449
4.4	Endocrine System	452
	Major hormones producing endocrine glands and organs	453
4.4.1	Hypothalamus	453
4.4.2	Pituitary gland	455
4.4.3	Pineal gland	457
4.4.4	Thyroid gland	457
4.4.5	Parathyroid gland	458
4.4.6	Thymus gland	458
4.4.7	Pancreas	458
4.4.8	Adrenal glands	461
4.4.9	Gonadal hormone	463
4.4.10	Hormones from kidney, heart, placenta and gastrointestinal tract	463
4.4.11	General mechanisms of hormone action	465
4.4.12	Hormones and diseases	466
4.5	Respiratory System	469
4.5.1	Respiratory organs	469
4.5.2	Mechanics and breathing	473
4.5.3	Respiratory volumes and capacities	475
4.5.4	Exchange of oxygen and carbon dioxide	476
4.5.5	Transport of oxygen and carbon dioxide	479
4.5.6	Control of respiration	482
4.5.7	Chemoreceptor	483
4.5.8	Disorders of respiratory system	484

- 4.6 Cardiovascular System 485
 - 4.6.1 Blood 485
 - 4.6.2 Heart 491
 - 4.6.3 Blood vessels 498
 - 4.6.4 Circulatory routes 502
 - 4.6.5 Lymphatic system 505
 - 4.6.6 Intracellular and extracellular fluid 506
 - 4.6.7 Cardiovascular disorders 506
- 4.7 Digestive System 507
 - 4.7.1 Gastrointestinal tract 507
 - Mouth 508
 - Pharynx 510
 - Esophagus 510
 - Stomach 510
 - Small intestine 513
 - Large intestine 514
 - Gastrointestinal motility 515
 - 4.7.2 Accessory digestive organs 516
 - Salivary glands 516
 - Liver 516
 - Gallbladder 517
 - Pancreas 518
 - 4.7.3 Digestion of foods 519
 - 4.7.4 Absorption of foods 522
 - 4.7.5 Regulation of digestive function 524
- 4.8 Excretory System 525
 - 4.8.1 Structure of the kidneys 526
 - 4.8.2 Nephron 528
 - 4.8.3 Urine formation 531
 - 4.8.4 Atrial Natriuretic peptide 538
 - 4.8.5 Countercurrent exchange 541
- 4.9 Reproductive System 542
 - 4.9.1 Male reproductive system 542
 - 4.9.2 Female reproductive system 545
 - 4.9.3 Female reproductive cycle 548
- 4.10 Embryonic development 551
 - 4.10.1 Fertilization 551
 - 4.10.2 A generalized pattern of early development 554
- 4.11 Regeneration 558

Chapter 5

Ecology

- 5.1 What is Ecology? 565
 - Level of organization 565
- 5.2 Environment 566
 - Soil 566
 - Air and Atmosphere 567
 - Light 568
 - Temperature 568
- 5.3 Adaptation and Acclimatization 568
 - Plants adaptation to water stress 569
 - Animals adaptation to thermal stress 569
- 5.4 Shelford's law of tolerance 570
- 5.5 Ecological species concept 571
- 5.6 The ecosystem concept 571
 - 5.6.1 Ecosystem components 572
 - 5.6.2 Ecosystem function 573
 - Productivity 573
 - Energy flow 575
 - Energy flow model 576
 - Ecological efficiencies 577
 - Concept of the trophic level 578
 - Food chains 579
 - Autotroph and detritus-based ecosystem 580
 - Ecological pyramid 580
 - Nutrient cycling 582
 - Carbon cycle 583
 - Nitrogen cycle 584
 - Phosphorus cycle 584
 - Sulfur cycle 585
 - Decomposition 586
 - 5.6.3 Ecosystem services 586
 - 5.6.4 Controls on ecosystem function 587
 - 5.6.5 Types of Ecosystems 587
 - Aquatic ecosystem 588
 - Marine ecosystem 588
 - Estuary 589
 - Freshwater ecosystem 589
 - Wetlands 591
- 5.7 Biomes 592

- 5.8 Population ecology 595
 - 5.8.1 Population characteristics 596
 - 5.8.2 Population growth 599
 - Population regulation 602
 - 5.8.3 r-strategists and K-strategists 605
- 5.9 Biotic community 606
 - 5.9.1 Ecological characteristics 607
 - Species composition 607
 - Keystone species 607
 - Species diversity 607
 - Diversity index 608
 - Disturbance and species diversity 609
 - 5.9.2 Island biogeography 610
 - 5.9.3 Nature and structure of community 611
 - 5.9.4 Ecological interdependence and interactions 613
 - Positive interaction 613
 - Negative interaction 614
 - Effect of competition 615
 - Lotka-Volterra model 619
 - Predation 623
- 5.10 Succession 624
 - 5.10.1 Types of succession 626
 - 5.10.2 Mechanism of succession 627
 - 5.10.3 Model of succession 629
 - 5.10.4 Hydrarch and Xerarch succession 630
- 5.11 Biodiversity 632
 - 5.11.1 Levels of biodiversity 632
 - 5.11.2 Gradients and Magnitude of biodiversity 633
 - 5.11.3 Uses of biodiversity 633
 - 5.11.4 Threats to biodiversity 634
 - 5.11.5 Extinction of species 635
 - IUCN red list categories and criteria 636
 - 5.11.6 Conservation of biodiversity 638
 - In-situ conservation strategies 639
 - Biodiversity Hotspots 639
 - 5.11.7 Biogeographic classification of India 640
- 5.12 Behavioural ecology 641
 - Altruism 641
 - Calculation of the coefficient of relatedness 642
 - Reciprocal altruism 645
 - Mating behaviour 645

	Optimal foraging theory	646
	Imprinting	646
5.13	Environmental pollution	647
5.13.1	Air pollution	647
5.13.2	Types of air pollutants	647
5.13.3	Criteria air pollutants	648
5.13.4	Greenhouse effect	650
	Global warming	651
5.13.5	Stratospheric ozone	652
5.13.6	Acid rain	654
5.13.7	Water pollution	654
	Causes of water pollution	655
	Biochemical Oxygen Demand and Chemical Oxygen Demand	655
	Bioaccumulation, bioconcentration and biomagnification	655
	Eutrophication	656
5.13.8	Soil pollution	656
5.14	Bioremediation	657
	Bioremediation strategies	657
	Phytoremediation	658

Chapter 6

Evolution

6.1	Origin of Life	663
6.2	Theories of evolution	668
6.2.1	Lamarckism	668
6.2.2	Darwinism	669
6.3	Evidences of evolution	673
6.4	Natural selection	675
	Evidences of natural selection	675
	Modes of natural selection	676
	Sexual selection	677
6.5	Pattern of evolution	678
	Adaptive radiation	679
	Red Queen hypothesis	679
6.6	Population genetics	679
6.6.1	Calculation of allelic frequencies	680
6.6.2	Hardy-Weinberg Law	681
	Extension of Hardy-Weinberg equilibrium	683
	Assumptions underlying Hardy-Weinberg equilibrium	685
6.6.3	Inbreeding	686

	Wahlund effect	690
	Effective population size	690
6.7	Species and speciation	691
	Concept of species	691
	Reproductive isolation	692
	Haldane's rule	693
	Speciation	693
6.8	Evolutionary forces involved in speciation	695
6.9	Pattern of evolutionary changes	697
6.10	Nature of evolution	698
6.11	Molecular phylogeny	699
	Molecular clock	700
	Phylogenetic tree	702
	Answers of self test	710
	Index	711
